

On the Subject of The Console

The screeching of the robot cat (AKA Dial-Up Internet) intensifies

This module has no visible status light and a black screen. This module can only be interacted with via typing on your keyboard when you've selected the module.

The behavior of this module is very similar to that of a text-based adventure game. There are certain commands which can be entered to interact with elements. The syntax for this module is strict, and there's no indication when you've typed an invalid command.

The module has 1 enemy, 1 hero, and 1 location each with statistics, and also 10 items and 5 weapons which each have rules which determine whether you use it or not. Note that the statistics values might not be within the normal range and values of N/A, ∞ and $-\infty$ may appear*.

To solve the module, use all the valid items, then use the weapon with the highest score value. If an incorrect item or weapon is used, or you attempt to use a weapon too early, the module will strike.

Valid syntax

view enemy	To view all of the enemy's stats
view hero	To view all of the hero's stats
view location	To view all of the location's stats
view items	To view all of the available items
view weapons	To view all of the available weapons
use item [L]	Use the item next to the letter [L] on the item page
use weapon [L]	Use the weapon next to the letter [L] on the weapon page

*For deciding which items and weapons to use, if N/A, ∞ or $-\infty$ are present in the stats, convert them accordingly using the table below.

N/A	0.0000000000118428
∞	8164259999999999
$-\infty$	-8164259999999999
